A document to introduce how to use the Paper Tracker Application
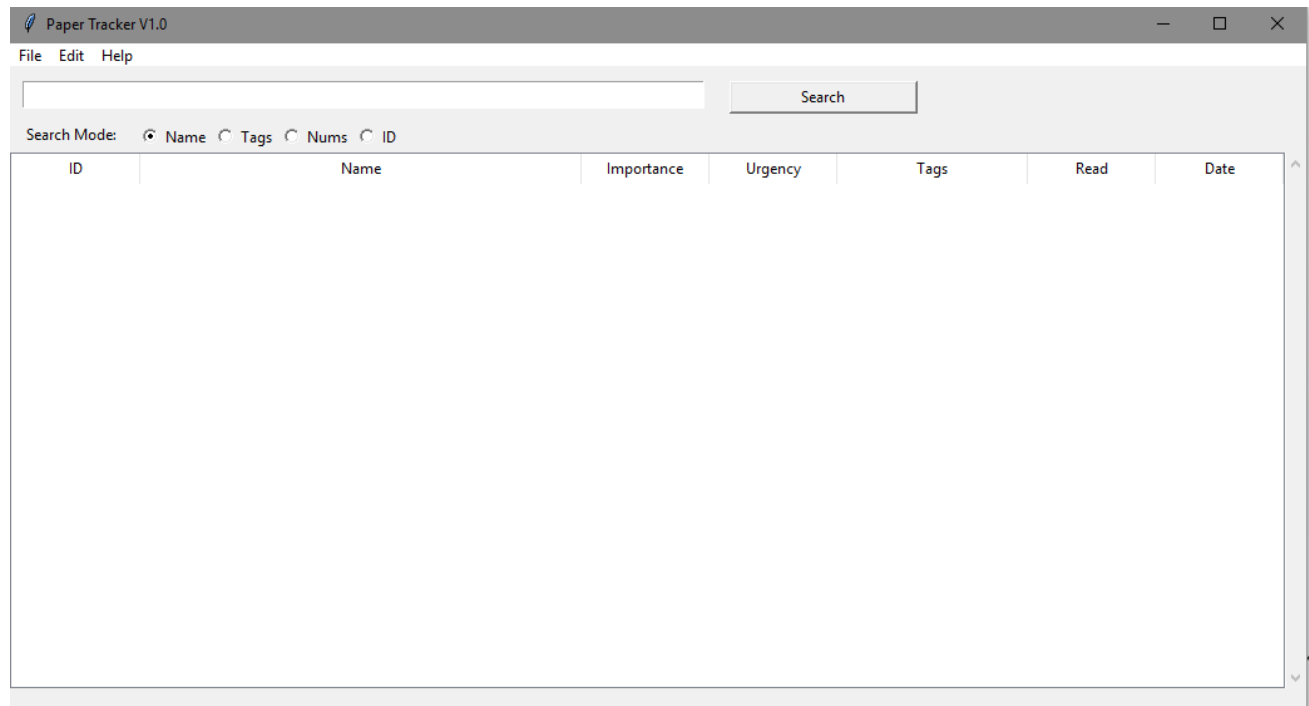

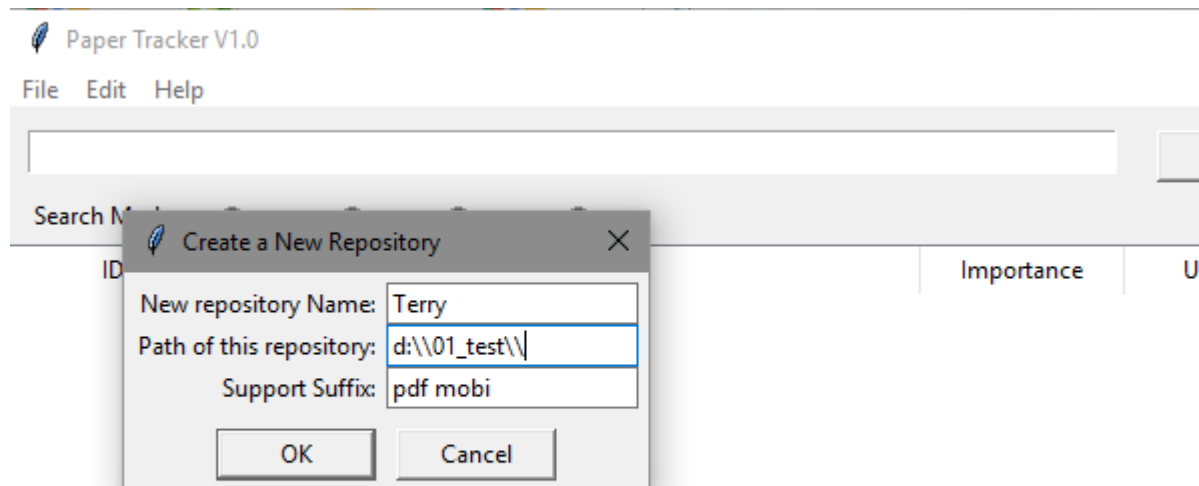

**Open this Application**

Command: python3.5 main.py

1. Create a new repository
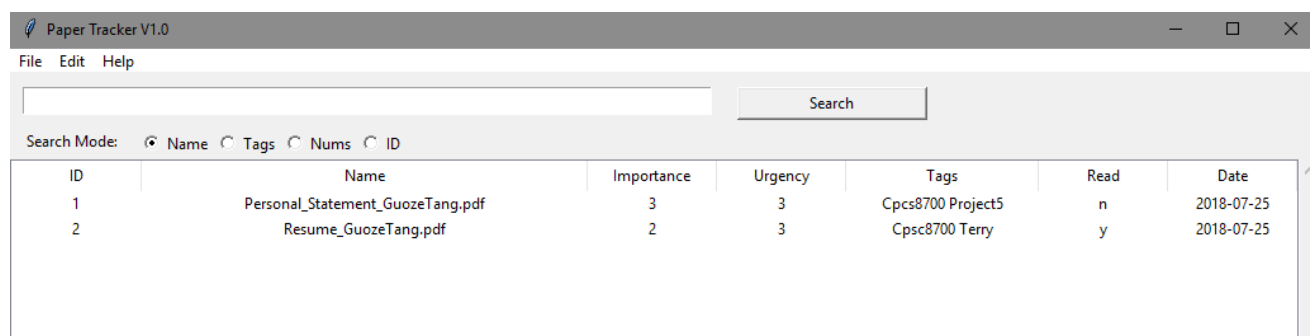

Select: File-> New repository

You need to input the repository name and the path of this repository. Of course, you need put some pdf documents in this folder. If there are some documents which don't end with pdf, we also can input the support suffix like pdf and mobi.

In this folder, I have put two pdf documents in it. So, when you create this New repository, it will ask for the information about these papers.
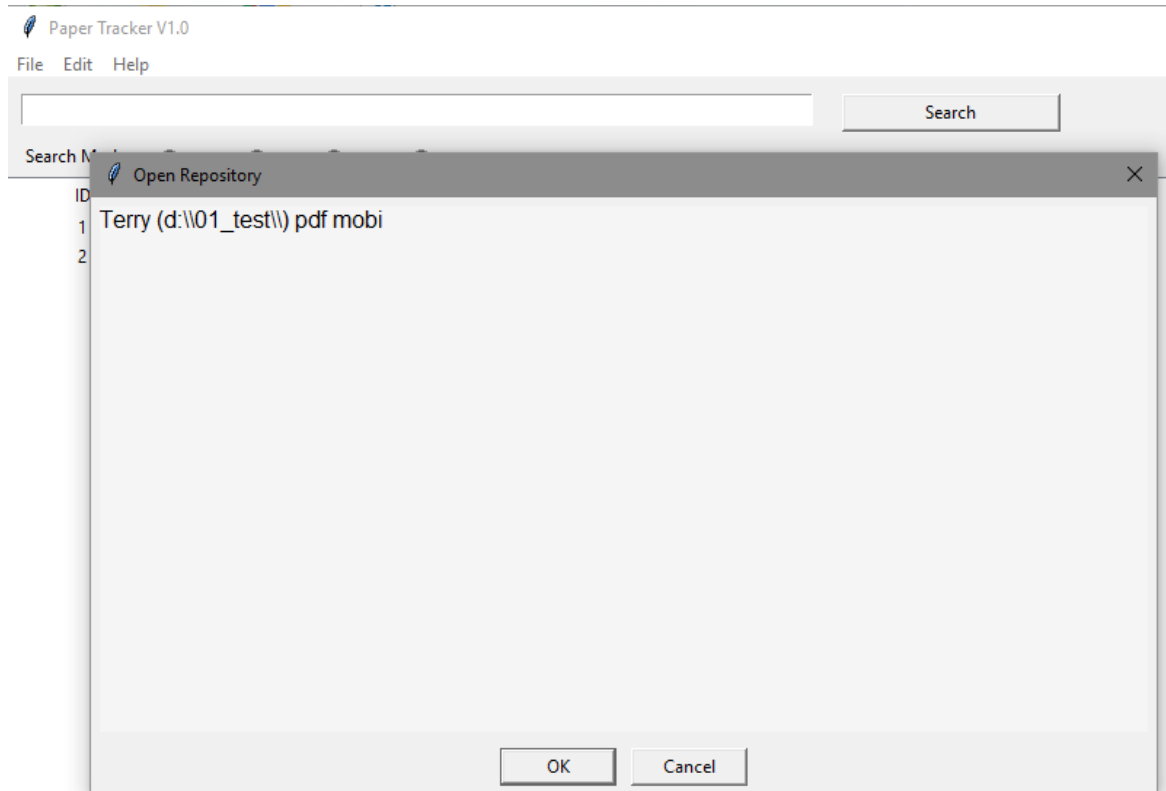

When you finish it, just click the Ok button. All the papers information will update in this table.

2. Open a repository
Select: File-> Open repository
You can find the name of the repository which you created before. Just select it. The application will load this repository.

Paper Tracker V1.0

File   Edit   Help

| | Search |

Search M...

Open Repository   ×

ID
1   Terry (d:\\01_test\\) pdf mobi
2

OK   Cancel

You can try to click some other button or the table. I have completed many functions of this Application.
I hope you can enjoy it. Thank you
